Digital Literacy

Name: Debasish Kumar Sahoo
Registration Number: 25BAI10173
Branch: B.Tech (AI/ML)
Year: 1st Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: March 2026

Introduction

Digital literacy is an essential skill in today's technology-driven world. It enables individuals to effectively use digital tools, communicate responsibly, and stay safe online. As a student, understanding digital literacy is important not only for academic success but also for future career opportunities.

This project was designed to help students explore various aspects of digital literacy, including online safety, professional presence, communication etiquette, and awareness of cyber threats. Through this project, I worked on creating an infographic, building a digital portfolio, exploring online platforms, practicing professional communication, and understanding cybercrime.

Overall, this project provided practical exposure to essential digital skills and helped me understand how to use technology responsibly and effectively in daily life.

Task 1: Digital Literacy Infographic

For this task, I created a digital literacy infographic using Canva. Canva is a user-friendly design tool that allows the creation of visually appealing content with ease. The purpose of the infographic was to spread awareness about digital literacy among students.

The infographic covered multiple important topics such as the meaning of digital literacy, safe internet practices, building a professional online presence, useful digital tools, and

email etiquette. I designed the infographic in a structured way to ensure that the information is easy to understand and visually engaging.

One interesting part of this task was selecting a suitable layout and organizing the content effectively. The challenging part was presenting all important points in a limited space without making the design look crowded. This task helped me understand how visual communication can be used to convey important information effectively.

Task 2: Digital Portfolio

In this task, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. These platforms are widely used by students and professionals to showcase their skills, projects, and achievements.

GitHub is mainly used for hosting projects and collaborating on code. I created my profile and added a README to introduce myself. LinkedIn is a professional networking platform where I added my education details and created a structured profile. Kaggle is a platform for data science and machine learning, where I created a profile to explore datasets and competitions.

These platforms will help me build my digital presence over the next four years. I plan to upload projects on GitHub, grow my professional network on LinkedIn, and improve my data skills using Kaggle. This task helped me understand the importance of maintaining a professional online identity.

Task 3: Coding & Collaboration Platforms

For this task, I explored both coding and collaboration tools. I completed a beginner-level coding problem on HackerRank, which helped me understand basic programming logic and improve my problem-solving skills.

In the second part, I created a Google Form titled “Digital Literacy Awareness Quiz.” The form included five questions related to digital literacy, online safety, and communication. I also reviewed the responses using Google Sheets, which helped me understand how data collection and analysis work.

These platforms are very useful for academic and professional purposes. Coding platforms help in improving logical thinking and programming skills, while tools like Google Forms are useful for surveys, quizzes, and collaboration. This task provided practical experience in using digital tools effectively.

Task 4: Email & Communication Etiquette

In this task, I learned about professional communication and email etiquette. I drafted two professional emails: one requesting an assignment extension and another expressing interest in an internship opportunity.

Both emails were structured with proper subject lines, greetings, body content, and polite sign-offs. This helped me understand the importance of maintaining a professional tone while communicating digitally.

I also created a social media Do’s and Don’ts checklist to promote responsible online behavior. Poor digital communication can lead to misunderstandings and create a negative impression. For example, sending informal or unclear emails to professors can appear unprofessional.

This task helped me understand how proper communication plays a key role in both academic and professional environments.

Task 5: Cybercrime Awareness

In this task, I explored cybercrime with a focus on UPI fraud. I learned how scammers trick users into approving fake payment requests and how lack of awareness leads to financial loss.

What surprised me the most was how simple tricks can lead to serious consequences. Many users are unaware that entering a UPI PIN is only required when sending money, not receiving it.

This task made me more aware of online safety. One habit I will change is being more cautious while handling online transactions and verifying all requests before taking action. It helped me understand the importance of staying alert and practicing safe digital behavior.

Conclusion

This project provided a comprehensive understanding of digital literacy and its importance in everyday life. Through various tasks, I learned about online safety, professional communication, digital tools, and cybercrime awareness.

It helped me develop practical skills that will be useful in academics and future career opportunities. I also realized the importance of maintaining a responsible and professional digital presence.

Overall, this project was a valuable learning experience that improved my awareness and confidence in using digital technologies effectively.
